

Jinyoung Choi

Phone: (646) 599-7701 Email: choij4@rose-hulman.edu

Portfolio: <https://youngpandajin.github.io/>

Education

Bachelor of Science, Computer Science

Rose-Hulman Institute of Technology,
GPA: 3.42

Related Courses: *Data Structure & Algorithm Analysis, Intro to Web Programming, Software Project Management, Software Requirement Engineering, Computer Game Development*

Honors: *Cum Laude, Dean's List*

May 2024

Terre Haute, IN

Experience

Software Engineer Intern

Rose Ventures

May 2023 - May 2024

Terre Haute, IN

- Developed and extended client websites with new pages using React, TypeScript, HTML, C# and SQL for full-stack development
- Collaborated with the Client, Project Managers, and coworkers in regular meetings to translate requirement into technical features
- Utilized Agile processes, including participating in sprint planning, daily stand-ups, and sprint reviews to ensure timely delivery of features
- Leveraged DevExtreme Library to build sortable, filterable UI component, upon the client's response resulting in a improved user experience
- Identified and resolved critical bugs ensuring website stability and preventing potential downtime

Grader and Lab TA

Rose-Hulman Institute of Technology

Jan 2023 - May 2024

Terre Haute, IN

- Assisted students in different areas such as databases and Software Design in and out of class with approximately 30 students in each class
- Provided feedback on assignments and graded labs to ensure student comprehension and performance improvement

Projects

Rose Data | *Typescript, CSS Postgres, Angular, Bootstrap, Github Actions*

- Designed a website to support the student and staff in scheduling classes
- Developed new components with Angular Typescript for frontend and connected to a Postgres database to retrieve and display the student's four year plans for the school
- Set up Github Actions for CI/CD automations to streamline development

NetStrike | *C#, Unity*

- Developed a Multiplayer 3D First-Person Shooter game using Unity C#
- Designed a 3D map based on a Rose-Hulman's Moench building using Unity Engine
- Used external libraries to do local hosting and local connecting

Sarcastic AI Friend | *Python, PyTorch, Hugging Face, Speech Recognition, pyttsx3*

- Developed an AI based system that listens to the user voice and generates a sarcastic response using Hugging Face's Transformer Library including Meta's LLaMA-2-7B language Model
- Implemented Google Speech Recognition API to capture voice input and process it to pass it to the model for natural language generation
- Solved challenges with speech recognition timeouts and TTS engine initialization for a smoother user experience

Rubik's Cube | *JavaScript, WebGL*

- Developed an interactive computer graphic project emulating a Rubik's Cube
- Created a feature that randomizes the Rubik's Cube initial scramble to enhance user interaction

Skills

- Languages: Python, Typescript, SQL, JavaScript, HTML, CSS, C#, C++
- Frameworks and Libraries: React, Bootstrap, Angular
- Technologies and Tools: MySQL, Git, Node.js, Jira, Figma, Unity, Visual Studio
- Korean (fluent)
