EXPERIENCE

Full Stack Software Engineer

FloQast

Dec 2024 – Present

New York, NY

- Led the JEM integration, partnering closely with the JEM team to replace a polling system with a webhook-driven architecture that updates journal entry state in real time, with multi-subsidiary support — later extended to let users submit a JE when creating a transfer or disposal
- Co-led migrating the amortization/depreciation app to pull from the new data platform (DP2), driving cross-team coordination to ensure the app's data flowed correctly through the new pipeline used by net-new customers
- Build and maintain the amortization/depreciation scheduler that pulls client transaction data, computes schedules across tens of thousands of items, and renders interactive views used by accounting teams during the month-end close
- Designed and shipped Bulk Edit for the amortization/depreciation app, mapping out the data and user flow and validating edits against the data platform to confirm values matched, enabling users to update multiple amort/depr items at once
- Expanded the disposal logic, enabling users to capture additional details — including related accounts and sales amounts — before disposing of one or multiple items
- Resolved 36 production defects over 1.5 years and shipped UI improvements across the platform using TypeScript, React, MongoDB, and AWS, including reworking an entire schedule calculation method to improve accuracy and reliability

Software Engineer Intern

Rose Ventures

May 2023 – May 2024

Terre Haute, IN

- Developed and extended full-stack client applications using React, TypeScript, C#, and SQL, delivering new pages and features across multiple client engagements
- Built sortable, filterable data table components with the DevExtreme library, directly addressing client feedback and improving data navigation workflows
- Identified and resolved critical production bugs, preventing downtime and ensuring platform stability across deployments
- Collaborated in Agile sprints with project managers and clients to translate business requirements into shippable technical features

PROJECTS

Rose Data | *TypeScript, Angular, PostgreSQL, GitHub Actions*

- Developed a class scheduling platform for students and staff, building Angular components that query a PostgreSQL backend to display and manage four-year academic plans
- Configured GitHub Actions CI/CD pipelines to automate testing and deployment, reducing manual release overhead

EDUCATION

Bachelor of Science, Computer Science

Rose-Hulman Institute of Technology

May 2024

Terre Haute, IN

GPA: 3.42 | Cum Laude | Dean's List

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, C#, C++, HTML, CSS

Frameworks: React, React Native, Angular, Node.js, Bootstrap

Tools & Infrastructure: AWS, MongoDB, PostgreSQL, MySQL, Git, GitHub Actions, Jira, Figma, Unity

Other: Korean (fluent)
