Portfolio: <https://youngpandajin.github.io/>

Education

Bachelor of Science, Computer Science

Rose-Hulman Institute of Technology, Terre Haute, IN

May 2024

GPA: 3.42

Related Courses: Data Structure & Algorithm Analysis, Intro to Web Programming, Software Project Management, Software Requirement Engineering, Computer Graphics

Skills

- Korean (fluent)
- Java, C, Typescript, React, HTML, CSS, JavaScript, OpenGL, SQL, C#, Python, C++, GML, Racket Scheme, WebGL, Unity

Experience

Software Engineer Intern - Rose Ventures

Summer 2023 - Spring 2024

- Added onto the client's current website by making new pages that connected Ui design with CRUD using React, Typescript, Html, C# and SQL
- Collaborated with the Client, Project Managers, and coworkers in regular meetings
- Utilized Agile methodologies, including participating in spring planning, daily stand-ups, and sprint reviews to ensure timely delivery of features
- Utilized DevExtreme Library to create sortable and filterable tables

Grader and Lab TA

Winter 2023 - Spring 2024

- Assist students in the databases including relational algebra and SQL
- Grade assignments and provide feedback for homework and labs

CTE Industry Scholar Program

June 2019 - August 2019

- Participated in a competitive internship program where students develop industry related skills in one of the 18 major employment sectors
- Took part in 6 hours of career readiness training including: professional communication, career, and financial management

Projects

Rose Data

Spring 2022 - Present

- Developing a website to support the student and staff in scheduling classes
- Created new component pages using Angular TypeScript, Html, CSS
- Connected to Postgres Database to populate data onto the frontend

Network Unity Game

Spring 2023

- Developed a 3D First-Person Shooter game using Unity C# and Networking strategies
- Used external libraries to do local hosting and local connecting
- Designed a 3D map based on a real life location using Unity Engine

Rubik's Cube

Fall 2022

- Developed an interactive computer graphic project emulating a Rubik's Cube
- Learned and applied WebGL and JavaScript to control all interactions
- Created a feature that would randomize the Rubik's Cube initial scramble

Editor Trees

Fall 2021

- Created a custom tree that combines AVL and ranked trees using Java
- Wrote methods that represent the backend of text editors
- Led debugging and testing process for this project

ChatTime

Fall 2021

- Created a messenger webapp using JavaScript, HTML, CSS, and Firebase
- Included custom features such as global chatroom, friends list, and profile

Honors

- Cum Laude, Dean's List

Activities

- Game development and programming, Society of Asian Scientists and Engineers (SASE)
